EDUCATION

University of California, Berkeley

Bachelor of Science in Electrical Engineering & Computer Sciences

Relevant Coursework: CS 61A/B/C, CS 70, EECS 16A, Math 53, EECS 16B

Organizations: Computer Science Mentors, Society of Women Engineers, Go Club, Cal Climbing

May 2027

GPA: 3.73

WORK EXPERIENCE

Theo AI @ Async Labs

June 2025 – August 2025

Software Engineering Intern

- Built an end-to-end RAG pipeline using LlamaCloud + LLM agents to retrieve and summarize 1k+ historical IT tickets, cutting troubleshooting time through automated similarity search and next-step generation.
- Designed AI agent architectures for autonomous workstation management; compared ReACT vs computer-use agents and authored 30+ production-ready system-admin automation scripts.

UC Berkeley Hybrid Robotics Lab

June 2023 – August 2023

Research Intern with Professor Koushil Sreenath

- Implemented reinforcement learning locomotion algorithms (proportional-derivative control) in PyTorch + Mujoco to optimize robot movement.
- Analyzed how environmental parameters affected sim-to-real policy transfer for quadrupedal robot locomotion.

Space Cookies, FIRST Robotics Team & Girl Scouts Troop

August 2020 – June 2024

Software Captain

- Led 20-person software team in developing autonomous subsystems and navigation, control systems, and code framework for competitive robotics using Java and GitHub version control.
- Designed a 10-week technical workshop curriculum covering Java fundamentals and robotics software development.
- 2023 Regional Innovation in Controls Award, 2x Impact Award.

PROJECTS

BetaBot: AlphaGo's Beta Counterpart

June 2025 – Current

- Building a Go-playing AI from scratch, including a full board-state engine and a neural network for move prediction.
- Implementing a reinforcement learning training pipeline to continuously improve policy strength.
- Developing deployment infrastructure for online game servers and a teaching interface for students to play and review games with the bot.

TEACHING & INVOLVEMENT

UC Berkeley Electrical Engineering & Computer Sciences (EECS)

June 2025 – August 2025

CS 61B Tutor

- Facilitated daily 2-hour labs and weekly discussion sections for 50+ students, delivering engaging mini-lectures and interactive lessons on data structures & algorithms concepts including trees, graphs, sorting algorithms, runtime analysis.
- Collaborated with course staff team to shape curriculum and maintain UCB course standards through exam development and grading, online forum support, and weekly staff meetings to optimize student learning.

Computer Science Mentors @ UC Berkeley

January 2025 – Current

CS 61A Senior Mentor

- Lead cohort of junior mentors and contribute to decision-making for student-run computer science mentoring organization serving 300+ students per course.
- Taught weekly CS 61A small-group sections (average student rating: 4.7/5), and mentor junior staff on effective teaching techniques for structure and interpretation of computer programs concepts.

SKILLS

Computer Languages: Python, Java, C, SQL, Scheme, Bash, Git/GitHub

Frameworks & Tools: React, Flask/FastAPI, Docker, Linux, VSCode, GitHub

Systems & Concepts: Data structures & algorithms, version control, APIs, CI/CD

AI/ML: RAG pipelines, vector databases (LlamaCloud), LLM integration, LangGraph

Hardware/Robotics: Control systems, embedded systems, circuit analysis, roboticsx

Languages: English (fluent), Mandarin Chinese (fluent)
